

Problem 1: Current Date and Time

Write a Python program using the datetime module to display the **current date and time**.

Example Output:

Current Date and Time: 2026-09-26 11:30:45

Problem 2: Write a Python program that creates a Python dictionary containing a student's **name, age, and department**. Then convert the dictionary into a **JSON string** using the json module and print it.

Input:

```
student = {  
    "name": "Rahim",  
    "age": 20,  
    "department": "CSE"  
}
```

Expected Output:

```
{"name": "Rahim", "age": 20, "department": "CSE"}
```

Submission Guidelines

- Solve **both problems** using Python.
- Create a **GitHub repository** for your solutions.
- Upload both .py files to the repository.
- Submit the **GitHub repository link** before the deadline.
